

Recommended Mastercam Backups

It's that time, when we recommend backing up your all work, as it is well worth a bit of effort. Help yourself out and backup.

Below is a list of default locations for your critical files that you should back up.

As always, if you have questions, give us a call or send e-mail. We'll be happy to help.

File Extension	File Description	Default File Location
.MCX	Mastercam Part File	C:\McamX\mcx
.CONTROL	Machine Control File	C:\McamX\cnc_machines
.MMD	Mill Machine Definition	C:\McamX\cnc_machines
.LMD	Lathe Machine Definition	C:\McamX\cnc_machines
.RMD	Router Machine Definition	C:\McamX\cnc_machines
.WMD	Wire Machine Definition	C:\McamX\cnc_machines
.PST	Post Processor	C:\McamX\Mill\Posts C:\McamX\Lathe\Posts C:\McamX\Wire\Posts C:\McamX\Router\Posts
.CONFIG	Configuration File	C:\McamX\config
.MTB	Mastercam Toolbar File	C:\McamX\config
.KMP	Mastercam Key Map File	C:\McamX\config
.ACC	Access Code File	C:\McamX\

Or, instead of backing up individual files, you may back up folders that contain the critical files. The folders that should be backed up are circled in red. For example, if you were using only Mill, you would not need to back up Design, Lathe, Router or Wire.
